Policies and Procedures	Page 1 of 2
Title EHS	Effective Date 05/02/2012

~~Administrative Services Manual~~
~~EHS~~
ta

This policy applies to known or suspected carcinogens. These carcinogens are listed by several regulatory agencies and research groups. The National Toxicology Program (NTP) has developed three groups to classify known or suspected carcinogens:

- GROUP 1: known human carcinogens
- GROUP 2: reasonably anticipated to be carcinogens
- GROUP 3: known animal carcinogens

EHS/RMS has access current research findings and may elect, based on these findings, to consider a chemical a carcinogen prior to NTP action.

Supervisors and Principal Investigators (P.I.'s) are responsible for establishing safe practices, assuring that personnel are trained in these practices, and for reporting exposures or potential exposures to chemical carcinogens to EHS/RMS

(<http://www.uaa.alaska.edu/EHSRMS/ehspersonnel.cfm>)

_____). They are also responsible for submission of safety plans for the use of chemical carcinogens. These plans must be reviewed and approved by EHS/RMS prior to use of the carcinogens.

~~SP~~

The safety plan is to describe:

- The procedures that will be used to insure the safe handling of chemical carcinogens
